

1.

a) $A \cap B$ b) $A - B$ c) $A \cup B$ d) $C - (A \cap B)$

2.

(i) $\{a, b, c, d\} \cup X = \{a, b, c, d, e\} \Rightarrow e \in X.$

(ii) $\{c, d\} \cup X = \{a, c, d, e\}$

(iii) $\{b, c, d\} \cap X = \{c\} \Rightarrow c \in X; b \notin X, d \notin X$

Por (ii) $\{c, d\} \cup X = \{a, c, d, e\}$

como $d \notin X$ e $c \in X$ (por iii) temos que $a \in X.$

Portanto

$$X = \{a, c, e\}.$$

3.

$$1 \in A \quad \text{ou} \quad 1 \in B$$

$$4 \in A \quad \text{ou} \quad 4 \in B$$

$$C = \{2, 5, 6, 7, 9, 10\}.$$

$$4. \quad \{1, 2\} \subset X \subset \{1, 2, 3, 4\}.$$

$$X = \{1, 2\} \quad \text{ou} \quad X = \{1, 2, 4\}$$

$$X = \{1, 2, 3\} \quad \text{ou} \quad X = \{1, 2, 3, 4\}$$

$$5. \quad A = \{e, x, r, c, i, o\}$$

$$B = \{2, 3, 4, 5\}$$

$$\left. \begin{array}{l} x^2 - 5x - 6 = 0 \\ (x + 1) \cdot (x - 6) = 0 \end{array} \right\} \Rightarrow C = \{-1, 6\}$$

$$\begin{array}{l} 2x + 1 = 0 \\ 2x = -1 \\ x = -\frac{1}{2} \end{array} \Rightarrow D = \{-\frac{1}{2}\}$$

$$\boxed{\begin{array}{l} x^2 - 9 = 0 \\ x = 3 \text{ ou } x = -3 \end{array}}$$

$$\boxed{\begin{array}{l} 2x - 1 = 9 \\ 2x = 9 + 1 \\ x = 5 \end{array}}$$

$$\Rightarrow E = \{-3, 3, 5\}.$$

7.

$$[-1, 3] = \{x \in \mathbb{R} : -1 \leq x \leq 3\}$$

$$[0, 2) = \{x \in \mathbb{R} : 0 \leq x < 2\}$$

$$(-3, 4) = \{x \in \mathbb{R} : -3 < x < 4\}$$

$$(-\infty, 5) = \{x \in \mathbb{R} : x < 5\}$$

$$[1, +\infty) = \{x \in \mathbb{R} : x \geq 1\}$$

8.

$$[-1, 3]$$

$$[0, 4]$$

$$[-1, 3] \cup [0, 4] = [-1, 4]$$

$$(-2, 1] \cup (0, 5) = (-2, 5)$$

$$[-1, 3] \cup [3, 5] = [-1, 5]$$

$$\left[-\frac{1}{2}; 0\right) \cup \left(-\frac{3}{2}; -\frac{1}{4}\right] = \left(-\frac{3}{2}; 0\right)$$

a) $\overline{A} = (-\infty, 2) \cup [5, +\infty)$

b) $\overline{A \cap B} = \overline{[2, 5)} = (-\infty, 2) \cup [5, +\infty)$

c) $\overline{C \cup A} = \overline{C} = (-\infty, -3) \cup [6, +\infty)$

d) $\overline{C} \cap C = \emptyset$.

10. Os números dentro dos conjuntos A e B representarão a quantidade de elementos que eles possuem:

$$30 + 10 + x = 48$$

$$x = 8$$

11.

$I = \{ \text{usuários do Internet Explorer} \}$

$M = \{ \text{usuários do Mozilla Firefox} \}$

$U = \{ \text{alunos entrevistados} \}$

$$n(M \cup I) = n(M) + n(I) - n(M \cap I)$$

$$n(M \cup I) = 160 + 115 - n(M \cap I)$$

$$n(M \cup I) = 275 - n(M \cap I)$$

Como não há informação sobre a quantidade de entrevistados que não usam nenhum dos navegadores, não temos como determinar.

Se supormos que todos os 200 utilizam um dos navegadores então:

$$200 = 275 - n(M \cap I)$$

$n(M \cap I) = 75 \Rightarrow 75$ pessoas utilizam os dois navegadores.

42. $B = \{\text{brancos}\}$ $n(B) = 70$

$N = \{\text{negros}\}$ $n(B \cup A) = 350$

$A = \{\text{amarelos}\}$ $n(A) = n(A \cup B \cup N) \cdot \frac{1}{2}$

Não há interseção entre os conjuntos. Então

$$A \cup B - B = A \quad \Rightarrow \quad n(A \cup B) - n(B) = 350 - 70 = 280 \\ = n(A).$$

a) Há $280 \cdot 2 = 560$ indivíduos na comunidade.

b) 280 são amarelos.
